Implementation Plan: WhatsApp UI Redesign, WhatsApp Enable/Disable Toggle, 'INC-' Order IDs & Orders Pagination (5 Items/Page)

This plan outlines the architecture, design changes, and file updates required to implement all 4 requested features across the INEZA Resto & Coffee Shop platform.

1. Feature Breakdown & Objectives

I. WhatsApp Share Button UI Redesign

- **Current State**: Standard Bootstrap green buttons (`btn-success`) with simple text and icons.
- **Enhanced Design**:
  - Premium brand gradient: `linear-gradient(135deg, #25D366 0%, #128C7E 100%)` .
  - Polished micro-interactions: smooth hover lift (`translateY(-2px)`), soft green glow shadow (`0 6px 20px rgba(37, 211, 102, 0.35)`), and tap active feedback.
  - Iconography & Typography: Official FontAwesome WhatsApp icon, clear typography ("Share E-Receipt via WhatsApp"), and a quick-action badge.
  - Mobile App Touch Targets: Ergonomic 44px+ height, rounded pill styling, and clear visual contrast in dark and light modes.

II. WhatsApp Enable / Disable Option (Desktop & Mobile)

- **Admin Control Panel**:
  - Add a dedicated feature toggle switch in **Admin Settings** (`admin.html` Tab 8: Restaurant Operations & Feature Modules) titled **"WhatsApp Share & Inquiries"**.
  - Persisted to MySQL `store_settings` via `api/settings.php` (`setting_key: whatsapp_enabled`) and cached in `localStorage ('favcafe_setting_whatsapp')` .
- **Desktop & Mobile Client Behavior**:
  - Desktop (`index.html` / `js/main.js`): Hides or shows WhatsApp share buttons in the Order Success modal, Timeline Tracking modal, and social bars.

    - Mobile (`mobile_app.html` / `js/mobile_app.js`): Hides or shows WhatsApp share button in the Order Tracking modal and digital receipt view.
    - Cross-tab / cross-device sync: Listens to storage events and API config fetch on startup.

III. Order ID Prefix Migration: "FC-" ➔ "INC-"

- **Rationale**: Update legacy Favorite Cafe prefix (`FC-`) to the official brand **INEZA Cafe** (`INC-`) (e.g. `INC-3110`).
- **Files to Update**:
    - `api/orders.php`: Random order generator fallback (`INC-` + 4-digit code).
    - `js/main.js`: Customer order creation ID generator (`INC-` + random code).
    - `js/admin.js`: Manual POS / walk-in order creator ID generator (`INC-` + random code).
    - `js/mobile_app.js`: Mobile customer checkout order generator (`INC-` + random code) & default mock orders (`INC-3307`, `INC-1234`, `INC-2840`, `INC-6129`).
    - Template Placeholders in `index.html` & `mobile_app.html`: `#FC-0000` ➔ `#INC-0000`.
    - Documentation in `flow_visual.html`.

IV. Orders Pagination (5 Items Per Page)

- **Mobile Customer Orders List (`mobile_app.html` / `js/mobile_app.js`)**:
    - Currently renders all orders without pagination.
    - Implement `MOBILE_ORDERS_PER_PAGE = 5`.
    - Add pagination controller:
        - Info label: `"Showing X to Y of Z orders"`.
        - Page navigation: `Previous`, dynamic page pills (`1`, `2`, `3`...), and `Next`.
        - Reset to page 1 upon filter or search change.
- **Desktop Customer Orders Modal (`index.html` / `js/main.js`)**:
    - Implement `DESKTOP_ORDERS_PER_PAGE = 5` in `renderMyOrdersModal()`.
    - Add compact pagination footer with Prev/Next and page status.
- **Admin Orders Management (`js/admin.js`)**:
    - Ensure `LIVE_ORDERS_PER_PAGE` is set to `5` (previously 7) and `RECENT_ORDERS_PER_PAGE` is set to `5`.

2. Proposed Changes by File

A. Admin Portal

- `admin.html`:
  - Add WhatsApp feature toggle card inside `#tab-settings` under `Restaurant Operations & Feature Modules`:

```
html
<div class="setting-module-card">
  <div class="d-flex align-items-center justify-content-between">
    <div>
      <h6 class="fw-bold mb-1"><i class="fab fa-whatsapp me-2 text-success">
</i>WhatsApp Share & Dispatch</h6>
      <p class="text-muted small mb-0">Enable or disable WhatsApp receipt
sharing on both Desktop and Mobile views.</p>
    </div>
    <label class="switch mb-0">
      <input type="checkbox" id="settingToggleWhatsApp" checked
onchange="handleCartSettingChange()">
      <span class="slider round"></span>
    </label>
  </div>
</div>
```

- `js/admin.js`:
  - Update `saveCartAdminSettings()` and `loadAdminStoreSettings()` to read and write `whatsapp_enabled`.
  - Update manual order generator: `var newId = 'INC-' + Math.floor(1000 + Math.random() * 9000);`.
  - Set `LIVE_ORDERS_PER_PAGE = 5` (was 7) to guarantee consistent 5 items per page.

B. Mobile App View

- `mobile_app.html`:
  - Redesign WhatsApp button inside `#mobileOrderTrackingModal`:
    - Apply class `btn-whatsapp-modern` with sleek SVG/icon, gradient background, soft shadow, and ripple effect.
  - Add pagination container `#mobileOrdersPaginationContainer` under `#mobileOrderHistoryList`.

    - Replace placeholders `#FC-0000` with `#INC-0000`.

- `js/mobile_app.js`:
    - Add `MOBILE_ORDERS_PER_PAGE = 5` and `currentMobileOrdersPage = 1`.
    - In `loadMobileOrderHistory()`:
        - Slice filtered orders to 5 items per page.
        - Render `#mobileOrdersPaginationContainer` with Prev/Next and page indicator.
    - Add `changeMobileOrdersPage(page)` function.
    - Update checkout order generator to `INC-` + 4 digits and mock orders to `INC-`.
    - Add `applyWhatsAppVisibility()` checking `favcafe_setting_whatsapp` and hiding/showing WhatsApp buttons accordingly.

C. Desktop Customer View

- `index.html`:
    - Redesign WhatsApp buttons in `#orderSuccessModal` and `#timelineModal` with modern gradient pill styling (`.btn-whatsapp-modern`).
    - Add pagination controls to `#ordersModal` for customer orders history.
    - Update template placeholders to `#INC-0000`.
- `js/main.js`:
    - Update order code generator to `INC-` + 4 digits.
    - Implement 5-items-per-page pagination for `renderMyOrdersModal()`.
    - Add `applyWhatsAppVisibility()` to dynamically toggle desktop WhatsApp buttons based on settings.

D. Backend API

- `api/orders.php`:
    - Change random ID fallback from `'FC-' . rand(1000, 9999)` to `'INC-' . rand(1000, 9999)`.
- `api/settings.php`:
    - Ensure `whatsapp_enabled` is recognized as an allowed store setting in `store_settings`.

3. Verification & Testing Plan

1. **WhatsApp Share Button UI**:
    - Inspect visually in both Desktop and Mobile views.
    - Verify hover state, shadow, icon alignment, and click to ensure the WhatsApp Web / App share dialog opens with the correctly formatted order receipt.
2. **Enable / Disable WhatsApp Toggle**:
    - Go to Admin Settings ➔ Toggle "WhatsApp Share & Dispatch" OFF ➔ Save.
    - Verify WhatsApp buttons are completely hidden on Desktop (`#orderSuccessModal` , `#timelineModal`) and Mobile (`#mobileOrderTrackingModal`).
    - Toggle ON ➔ Save ➔ Verify buttons reappear immediately.
3. **Order ID Format ("INC-")**:
    - Place a test order on Desktop and Mobile.
    - Verify the generated ID is `INC-xxxx` in the success modal, tracking timeline, order history, receipts, and database.
4. **Orders Pagination (5 Items Per Page)**:
    - In Mobile "Your Orders" tab, verify only 5 orders display per page, with functioning "Prev", "Next", and page indicators.
    - In Desktop "My Orders" modal, verify 5 orders per page.
    - In Admin Orders table, verify 5 orders per page.
