Walkthrough: Robust User Registration & Login System

Summary of Accomplishments

We upgraded and harmonized the complete User Registration & Login architecture across **INEZA RESTO & COFFEE SHOP** (Web App, Mobile PWA, and Admin Portal).

1. Backend Authentication Layer ()

- **Universal Payload Parsing**: Fixed input extraction so both `php://input` JSON bodies (`{ "action": "login", ... }`) and query string actions (`?action=login`) are processed seamlessly.
- **Rwandan Phone Normalization**: Added a phone normalization helper to support all local formats (`078...` , `079...` , `072...` , `073...` , `+25078...` , spaced or dashed). Users can register and log in interchangeably with their email or phone number.
- **Staff / Admin Credential Handling**: Dedicated admin validation supporting `admin@ineza.rw` / `admin2026` with role `'admin'` .
- **User Orders Endpoint**: Added `action=get_user_orders` to retrieve past orders for a specific user phone number or customer name.

2. Customer Web Application (&)

- **Login with Email OR Phone Number**:
  - The login modal now explicitly supports both emails and Rwandan phone numbers (`078... or name@gmail.com`).
- **Cart & Checkout Auto-Hydration**:
  - When a customer logs in, their profile (`Name` , `Phone` , `Address`) immediately pre-fills the checkout fields in the order drawer (`#orderCustName` , `#orderCustPhone` , `#orderCustAddress`).
- **Dynamic Navbar User Pill**:
  - Unauthenticated: Shows `Login / Account` .

    - Authenticated: Displays the user's first name with a profile icon and badge border.
- **Active Session Drawer**:
    - When logged in, clicking the user button displays the active account status with direct shortcuts to:
        - **View My Orders & Track** (filtered dynamically to the user's orders).
        - **Sign Out / Switch Account**.
- **Personalized Order History**:
    - `renderMyOrders()` now filters orders by the logged-in customer's phone number or name, ensuring customers see their own order history and live timeline statuses.

3. Mobile PWA Authentication ()

- Updated mobile API fetch calls to post clean JSON payloads to `api/auth.php`.
- Synced storage keys (`favcafe_active_user`) so users logging in on mobile maintain session state uniformly.

4. Admin Management Dashboard (&)

- Modernized demo admin credentials to `admin@ineza.rw` / `admin2026`.
- Sidebar user card automatically reflects the authenticated staff member's name and role (`initAdminAuthSession()`).
- Added `adminSignOut()` function for one-click logout back to the customer storefront.

Verification Results

Test Scenario	Input / Action	Result	Status
Email Login (JSON)	`testuser@ineza.rw` / `password123`	Returned 200 OK + user record (`Patrick Kayonga`)	✅ Passed
Local Phone Login	`0788123456` / `password123`	Returned 200 OK + user record	✅ Passed
Formatted Phone Login	`+250 788 123 456` / `password123`	Normalized to `0788123456` , login succeeded	✅ Passed
Admin Staff Login	`admin@ineza.rw` / `admin2026`	Granted admin role + saved admin session	✅ Passed
User Orders Query	`action=get_user_orders`	Returned order list filtered by customer phone	✅ Passed
